MIDI

Musical Instrument Digital Interface

MIDI stands for Musical Instrument Digital Interface, and it is an international standard protocol used for exchanging and communicating digital signals between musical instruments, computers, software, and other music-related devices. **MIDI** is utilized to transmit and control audio and music-related information among these devices. It serves as a crucial tool for composing, playing, editing, and controlling music and is widely employed in music production, live performances, recording studios, and the field of electronic music. **MIDI** is used to transmit music notes, music control commands, and other music-related data, enabling digital handling of musical expression.
