Audio Production

Audio Production refers to the process of creating audio content for various media and platforms such as music, audio recording, voiceovers, radio, film, and video games. This process consists of stages like recording, mixing, mastering, sound design, music composition, and editing, encompassing all the tasks related to producing the final audio product. Audio production is used to generate high-quality audio content, starting from music and voice recording to the final stages of mixing and mastering.

The workflow typically includes recording, editing, mixing, and mastering, with activities preceding it involving creative work such as composition, arrangement, and rehearsals, while post-production activities encompass music business aspects like distribution, marketing, [copyright](#) management, and audio asset management.
