Creamware DSP

The screenshot displays the STM 2448 software interface, which is a multi-channel audio mixer. It features 16 channels, labeled Ch09 through Ch24. Each channel strip includes a level meter at the top, a gain knob with an 'Inv.' button, a 'Stereo' indicator, a pan knob with 'M' and 'S' buttons, a 'Center' knob, a fader knob, and a 'D' (mute) button. Below the faders, there are input source selectors for various instruments like 'ASIO1', 'B4000', 'Prophet', 'SixStrin', 'SynthB', 'Vectro', 'Lightavi', 'Voice', 'Tom', 'bd', 'sn', 'over', and 'start'. The right-hand side of the interface contains a vertical menu with options for 'View' (8, 12, 16, 24), 'VUs' (Master, Fader, Level, AUX1-AUX6, Monitor), 'Pages' (01-24), and 'Bus'. The channel Ch20 is currently selected and highlighted in yellow.

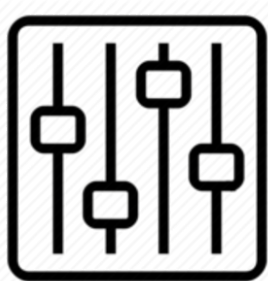

The patented method of the Swedish development team allows realistic reproduction of original sounds.
