## Lavalier MIC

A lavalier microphone, also known as a lavalier mic, is a small microphone that is typically clipped or pinned to clothing for regular use. Due to its attachment using a pin-shaped clip, it is also referred to as a “pin microphone.” This type of microphone is commonly used in various situations such as television broadcasts, film shootings, interviews, presentations, and more. Lavalier microphones are designed to capture the user's voice or speech, making them particularly focused on this aspect. Due to their portability and versatility, lavalier microphones find widespread use in a variety of applications.
