(Ambient noise, Background noise)

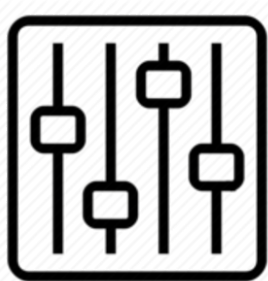

Ambience

Wherever you go, there are characteristic sounds of that place. For example, on a road, you may hear the sounds of passing cars and the rustling of the wind. In a forest, you may hear the sounds of trees swaying and the chirping of crickets. Inside an office building, there could be the sounds of computers running, keyboards being typed on, and people talking. These elements are referred to as environmental sounds or ambience audio.
